Securing data in a modern hybrid environment

HANDD
BUSINESS SOLUTIONS

Industry:
IT Software

Product:
Forcepoint

Solution:
Data Loss Prevention

THE CHALLENGE

A provider of a virtual account and cash management software on behalf of its global customer base needed a solution to prevent data loss across its internal on-premise network and for the customer provided cloud based (azure) platforms, that are completely isolated from one another. There has long been a general concern that a secure DLP platform hadn't yet been deployed for its unique architecture, with an imminent audit in 9 months, we were under time pressures to ensure the customer had reviewed the market and selected the best solution for them.

THE SOLUTION

A blend of DLP & CASB platforms from leading vendors were actively reviewed through HANDD. Forcepoint DLP was then selected by the customer as the initial solution to address the existing security shortcomings in the time available and later reviewed CASB offerings to address current and future cloud based data security needs. Forcepoint DLP's flexibility to prevent data loss across both an on-premise and cloud-based environment on one application, including the ability to tailor policies for each was a deciding factor in ensuring that PCI, PII & GDPR related information remained protected.

THE BENEFITS

A secure data loss protection system that safeguards its most secure asset (its cash management software) and the corporate infrastructure their employees work within. The customer was able to act swiftly on the best placed solution for them with the time available to deliver a solution before the audit was carried out. The business anticipated moving their entire internal corporate network into the cloud in the next 12 months. This solution provides them the flexibility to achieve this with minimal disruption to service & protection from data loss or misuse.
