

How a global insurance organisation gained control over their unstructured data

 **Industry:**
Insurance

 **Product:**
Varonis DatAdvantage & DatAlert

 **Solution:**
Data Discovery

THE CHALLENGE

A global insurance organisation were running a GDPR driven Data Governance project, of which data retention was a key requirement for them to gain visibility of unstructured and stale data across their legacy infrastructure. They also had serious concerns about the risks of group level access to data in millions of folders and files scattered across the business. Unsure which solutions on the market would best suite them, they trusted in HANDD as independent specialists and advisors to highlight the core differences between solutions and put forward our best-fit recommendation of Varonis.

THE SOLUTION

Varonis is a data security solution that focuses on detecting and protecting all types of data across business platforms. It allows organisations the ability to monitor and protect against both internal and external threats by analysing data, user behaviour and account activity, giving our customer the power to identify and lock down the sensitive and stale data they find.

THE BENEFITS

Introducing the company to Varonis, they are now able to ensure that only the right people within the organisation can access the data they need to do their jobs, removing the potential insider threats of having data across millions of folders accessible to everyone. As well as being able to fully identify who has access to their data, they can also see where all their data is stored, what is within that data and identify personal data for the purposes of GDPR quickly and easily.
